

SECURING YOUR REMOTE USERS

Going remote shouldn't mean going rogue.

Employee safety is #1 priority for all business.

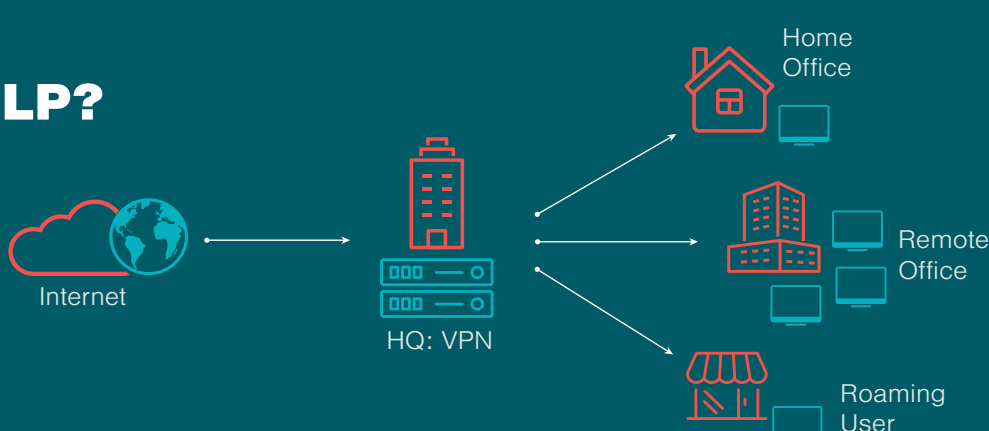

Ensuring business continuity is #2.

Residential internet is now business internet. Delivering secure remote access is crucial to ensuring business continuity.

CAN WE DO IT EFFICIENTLY AND SECURELY?

DOES MY VPN NOT HELP?

Sizing and Scaling

10% Typically sized for 10% of employees working remotely - not everyone

Scaling is expensive. Split tunneling is an option, but opens business to higher risk

Employee Experience

Bandwidth and points of presence limits increase cloud app latency

5% Only 5% of internet users in USA use VPN; globally about 25%

Security Risk

VPNs do not address threats such as malvertising, phishing, credential theft, ransomware, etc.

Attackers exploit known VPN vulnerabilities - patching introduces downtime

WHAT ABOUT UNMANAGED DEVICES?

14 WEEKS

Delay in shipments due to COVID-19. Unable or expensive to provide corporate devices to all users

Unmanaged devices usually have minimal security layers

Cannot install additional software to encrypt and monitor data on unmanaged endpoints

THE RISK SURFACE

1.25M Ad impressions per day from a single compromised ad server

1.5M New phishing sites created each month

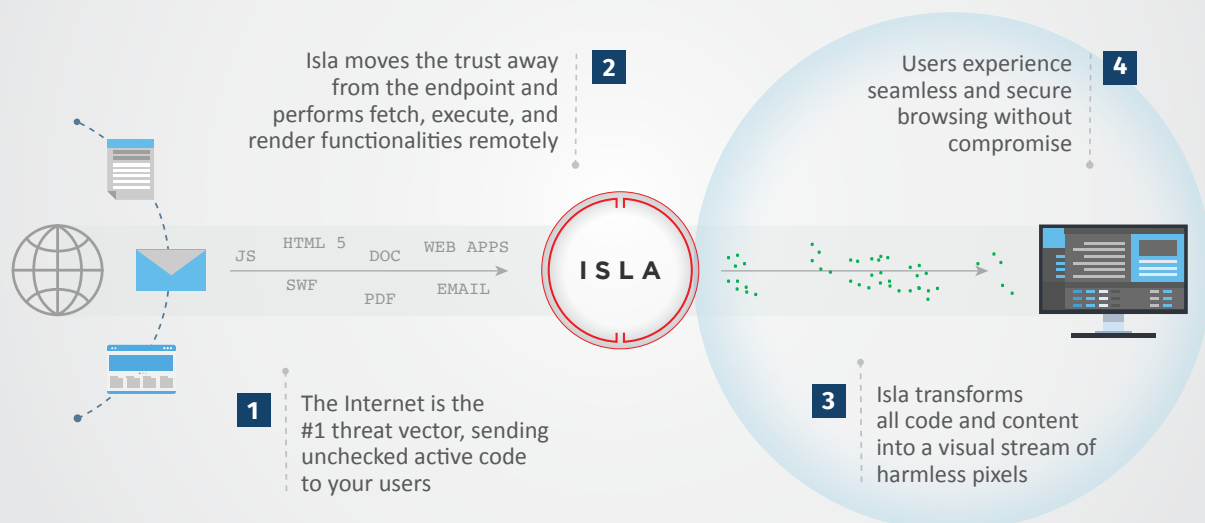

94% Malware threats arrive via email phishing

75% Companies infected with ransomware were running up-to-date endpoint protection

REMOTE BROWSER ISOLATION

Browser Isolation delivers simple, safe and easy access to all employees using a Zero Trust Model. It eliminates a wide variety of threats, including: ransomware, malware, phishing, credential theft, weaponized documents and more.

SECURE YOUR REMOTE USERS WITH CYBERINC ISLA

Ease of Implementation & Use

Agentless deployment with standard browsers to cover both managed and unmanaged endpoints

Security, Visibility & Control

Gain administrative visibility, remote management of user policies and protection against threats

Flexible Deployment Models

Choose between seamless cloud on-premises deployment or go with on-premise deployment to suit your needs

Overcome VPN Complexity, Reduce Cost

Eliminate complexity of traditional hub-and-spoke bottlenecks, while improving user experience

EXPERIENCE BROWSER ISOLATION WITH A FREE TRIAL
